Fixed telephony covers revenues from access fees and subscriptions, from calls from fixed lines including Internet connection calls, public telephones and cards, internet subscriptions (narrow-band and broadband).

Mobile telephony includes data transport on mobile networks (SMS, MMS, mobile internet).

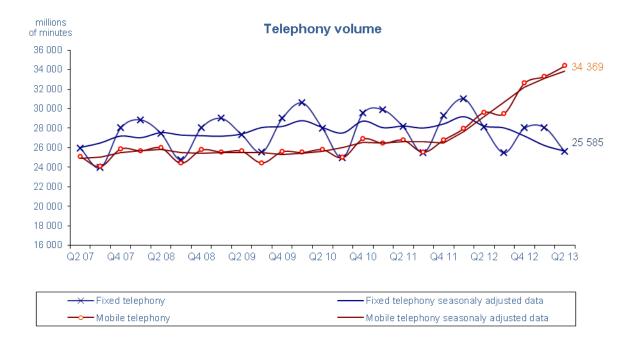

Other revenues does not really fall under the telecommunications services market. Since registered operators contribute little to this market, this indicator gives only a partial idea of total figures. This item covers revenues from terminals and equipment, from hosting and call centre management, and from directories and advertising.

#### Notes:

- Interconnection covers all the services provided by one carrier to another under the terms of an interconnection agreement. In cases of mergers or takeovers, some of the revenue streams between the telcos disappear, which might account for decreases in revenue from one quarter to the next.
- Interconnection income and traffic volumes are not calculated on the basis of the same criteria, making a comparison between the two indicators unsuitable for estimating average prices (interconnection income includes fixed income such as charges for connection links and intercarrier services).
- Note that the interconnection figures shown above might be counted twice, particularly in the case of fixed operators.
- From July 1st 2013, the price for call termination on fixed networks is set to 0.08c€/minute against 0.15c€/min since July 1st 2011 (decision 2011-0926) and 3.0 c€/min since October 1st 2011.
- Broadband wholesale services include income from unbundling and bitstream or bitstream equivalent services. The decision 2012-0007 (January 17 2012), about the rates of wholesale offerings regulated for the year 2012, amended in particular, the tariff of the unbundling which moved to €8.80 against €9.00.
- Mobile operators' interconnection services include income earned on call and SMS termination and on roaming in. The revenue issued from services of collection for the MVNO / full MVNO or national roaming operators, representing EUR 531 million for the whole of the year 2011, are not included.
- From July 1st 2013, the price for call termination on mobile networks is set to 0,8c€/minute for Bouygues Telecom, Orange France and SFR against 1.0€/minute between July 1st 2012 to 30<sup>th</sup> December 2012 and 1.5€/minute between January1st 2012 to June 30<sup>th</sup> 2012. The maximum price of the voice call termination on mobile networks is set, from 1<sup>st</sup> January 2013, at 1.1c€/min for Free mobile (network operator) and the full MVNO against 1.6c€ since 1<sup>st</sup> July 2012.
- The price of call termination for SMS is €1.0c for all operators since July 1, 2012, against 1.5 c€ for Orange France, SFR and Bouygues Telecom since July, 1, 2011 and until June 30 2012 (2 c€ /SMS in the DOM). History of rates is available on the site: http://www.arcep.fr/index.php?id=8080.
- The merger of France Telecom and Orange France removes financial flows and volumes between these two entities. Previously, the two companies were selling wholesale for interconnection of access and termination benefits.

Number of "bitstream" lines	1,394	1,379	1,347	1,324	1,283	-8,0%

Note: Bitstream is a wholesale solution marketed by the incumbent carrier that allows alternative operators to provide broadband access services to their customers who are located in areas where unbundling is not available, by connecting to one of the incumbent carrier's regional or national connection points.

#### 3.2.2 Incoming international interconnection

Note: This segment is a sub-set of the total market (cf.1.2.1).

Revenue of incoming international interconnection services (millions of euros)	Q2 2012	Q3 2012	Q4 2012	Q1 2013	Q2 2013	change 2Q13/2Q12

#### 3.2.3 Mobile operators roaming-in revenue

Roaming in	Q2 2012	Q3 2012	Q4 2012	Q1 2013	Q2 2013	change 2Q13/2Q12
Revenue (millions of euros)	103	124	86	72	79	-23,5%
Volume (millions of minutes)	498	642	439	445	533	7,0%

Note: This segment is a sub-set of the total market (cf.1.2.1).

- -Roaming-in refers to French mobile operators' handling of the incoming and outgoing calls made in France by customers of a foreign mobile operator. The revenue corresponds to the remuneration between the two operators. The relationship between call revenue/volume does not correspond to any set price, nor to any price that is billed to customers.
- Mobile operators have been subject to a ceiling on international roaming tariffs inside the EU since June 2007. This European regulation also includes a multi-annual plan for a steady decrease in this maximum price. As a result, on 1<sup>st</sup> July 2012, these Euro tariffs went from 0.35€ excl. VAT to 0.29€ excl. VAT for calls made from abroad, and from 0.11€ excl. VAT to 0.09€ excl. VAT for calls received when abroad. SMS tariff on the retail market has been set to 0.09€ excl. VAT per message.
- -. On the wholesale market the tariffs have been set (for the period from 1<sup>rst</sup> July 2012 to 1<sup>rst</sup> July 2013) to 3cts€ per message, to 14cts€ per minutes for the voice and to 25cts€ per Mo for mobile internet. When they are included in an Internet access flat rate, access to a VoIP services and IP calls are not factored into the revenue directly attributable to fixed telephony, but rather included in the "broadband Internet access revenue" indicator.

"Other services" refers to related income earned by ISPs on services such as hosting and online advertising revenue. From now on, this line also includes revenue connected to a broadband internet access and billed by operators (subscriptions to à TV service, video and music downloading...).

#### Note:

- In order to comply with the thresholds set down by the European Commission in the framework of its agenda for Europe for 2020, ARCEP have modified since the end of 2012 the definition of ultra broadband. Now, are counted as very high-speed subscriptions access to the internet with a flow-rate equal or greater to 30 Mbit/s. Other subscriptions with a flow rate equal or greater than to 100 Mbit/s is also published. These categories include subscriptions on fiber to the home networks (FttH), on "hybrid fiber coaxial cable" networks (HFC), on optical fiber with coaxial cable termination networks (FttLA). Only the category "other subscriptions broadband" is impacted. The total number of the broadband and ultra broadband subscribers is not changed;

- There can be a delay between the delivery of an offer in the wholesale market (LLU or bitstream) and its inclusion in retail market figures. Data comparisons for these different markets may reflect this delay.

#### Note:

-Subscription to an IP telephony service over xDSL lines without a PSTN subscription: telephone subscription on lines whose low frequencies are not used to support a voice service (neither by the incumbent carrier or alternative operators). Such is the case with voice over broadband services enabled by full unbundling and naked ADSL offers.

#### Details on the indicators for IP telephony services

#### Regarding the terminology used:

IP telephony service indicators in this publication cover voice over broadband regardless of medium (chiefly DSL IP, but also cable IP) and voice over Internet for operators that have declared their activity to ARCEP.

ARCEP defines "voice over broadband" as fixed telephony service using Voice over IP technology on an Internet access network at speeds in excess of 128 kbps where quality is controlled by the operator providing the service. It defines "voice over Internet" as voice communications using the public Internet network where service quality is not controlled by the operator providing the service.

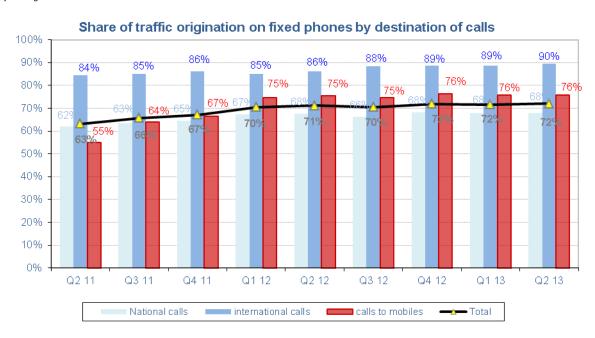

The outgoing Voice over IP calls counted by the Observatory correspond to access services. The indicators do not refer to IP traffic that traverses the IP backbone only. Moreover, the Observatory does not survey operators which have not declared their activity and which support PC-to-PC voice over Internet. These operators are outside the scope of the survey. Revenue taken into consideration

The Observatory distinguishes calls originating with IP telephony services from other voice calls. However, while VoIP calling volume includes all traffic observed in the end market, revenue includes only billed VoIP traffic (for example, over and above a service bundle flat rate).

From now on, this line also include revenues connected to a broadband internet access and billed by operators (subscriptions to à TV service, video and music downloading...). Revenue generated by terminal sales and rental is included under "fixed operator and ISP terminal sales and rental".

#### 4.3.4 Internet and TV over ADSL

TV Subscriptions on DSL (millions)	Q2 2012	Q3 2012	Q4 2012	Q1 2013	Q2 2013	change 2Q13/2Q12

#### Note:

<u>The average invoice per fixed line</u> now refers to what customers pay each month for their telephony and Internet services. The revenue included is therefore:

- revenue generated by access to subscriptions and additional services;
- revenue from calls originating on fixed lines, including IP traffic revenue billed over and above the bundled service flat rate:
- narrowband and broadband Internet access revenue.

#### Excluded are:

- public payphone and prepaid card revenue;
- revenue generated by other services tied to Internet access, e.g. ISPs' online ad revenue and commissions earned on e-commerce sales;
- VAS and directory assistance services revenue
- <u>The average monthly invoice per mobile customer</u> is calculated by dividing the income from mobile telephony (voice and data revenue, including roaming-out, excluding revenue from incoming calls and MtoM SIM cards) for quarter N by the estimated average number of mobile customers for quarter N, and then by the number of months. This indicator, which does not include interconnection revenue, or those from value-added services, is not the same as the traditional Average Revenue Per User (ARPU) indicator.

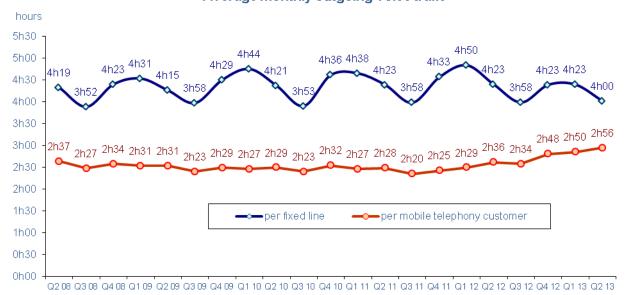

Note: The average monthly invoice per mobile telephony customer exclude MtoM cards (in revenue and in number of cards).

Average monthly outgoing traffic (in hours)	Q2 2012	Q3 2012	Q4 2012	Q1 2013	Q2 2013	change 2Q13/2Q12

- <u>The average monthly volume of traffic per fixed line</u> is calculated by dividing the volume of traffic (PSTN and IP) for quarter N by the estimated average number of fixed lines in existence for quarter N, and then by the number of months.
- <u>The average monthly volume of traffic per mobile operator customer</u> is calculated by dividing the volume of mobile telephony traffic (including roaming-out) for quarter N by the estimated average number of mobile customers for quarter N, and then by the number of months. SIM cards that can be used only for data (MtoM and data only cards) are not included in the calculations.
